

Triton 300/400

Applications

Triton products have the following applications:

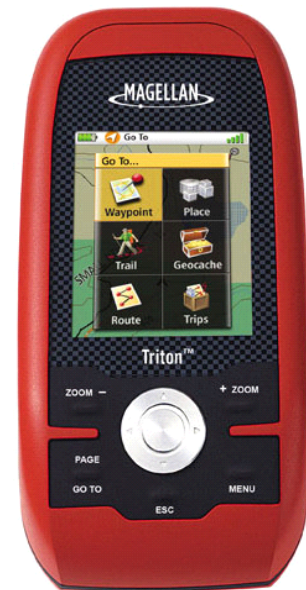

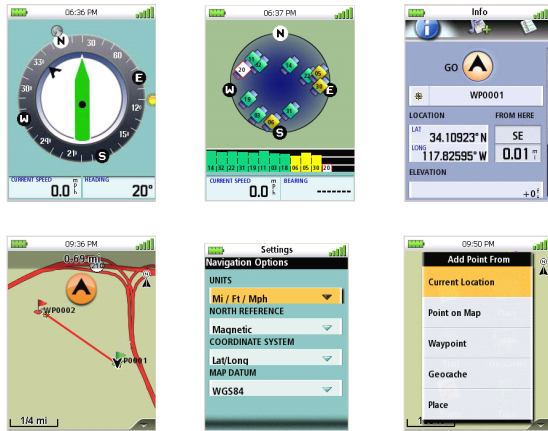

Area Calculation: Triton units allow you to measure areas of any kind and any size with accuracy.

Hunt & Fish Calendar: You will maximize your fishing and hunting performance, you will not waste time and you are sure to get home full-handed.

Sun & Moon Information: Can get you the right time for sunrise/sunset or moonrise/moonset; gives you the exact time of sunrise for any day of the year. Having such information can help you to properly organize your schedule for every outdoor activity.

Preloaded and Uploadable Maps: Users can use the preloaded maps of this device but can also upload other maps from Magellan.com.

Navigation: Triton 400 allows users to generate lots of information: Waypoints (1000), Routes (20), Geocaches (1000), Legs per Route (50), Tracks (15) and Points per Track (5000).

Bicycle mount

Features

- **Smartly designed and easy to use:** Simple menu, intuitive keypad, easy to view graphic and much more. This device leads you to information you want in just a few keystrokes.
- **SD-card compatibility:** Triton 400 supports SD cards. You can save as much information as you want. Triton 300 does not support SD cards.
- **Compass screen:** A beautiful graphic compass on which you can view your heading, direction of travel, bearing, distance and position destination, speed and much more.
- **Full-color 2.2" display, transfective:** The large display shows maps, simple menus, navigation screens and other data in brilliant colors.
- **3-meter accuracy:** SiRFstarIII™ chipset and integrated multidirectional antennae offer superior GPS accuracy using the Wide Area Augmentation System (WAAS).
- **Resistance:** Triton is built to withstand accidental impacts, intense use and is waterproof.
